Claims 1,2,5,17,20, 22-25 and 34-38 are rejected under 35 USC § 112, first paragraph for lack of written description. The examiner suggests that the specification does not adequately describe all varieties of sequences that hybridize to a nucleic acid sequence encoding the polypeptide of SEQ ID NO:2 and that varieties of such are likely not to have rep protein function. The same arguments is put forth relation to nucleic acid molecules that encode polypeptides having at least 70% identity to SEQ ID NO:2, as stated in Claim 5. Applicants respectfully traverse.

Claim 5 is canceled.

Claim 1 has been amended to insist that the limitation of rep function be a limitation of the claim as opposed to the preamble. Additionally, part (b) of claim 1 has been amended to clarify the hybridization conditions. Basis for this amendment may be found on page 9, lines 16-17 of the specification. Applicants submit that the specification provides adequate description for all nucleic acid sequences encoding the polypeptide of SEQ ID NO:2 which additionally have display rep function.

In view of the foregoing applicants request removal of all rejections and reconsideration of the claims as amended.
